AI FRESH GRADUATE

EDUCATION

UNIVERSITY OF MALAYA
Bachelor of Computer Science (AI)
CGPA: 3.80/4.00

Kuala Lumpur, Malaysia
Oct 2022 – March 2026

EXPERIENCE

INSIDE ADVISORY SDN BHD
Full-stack Developer & AI Engineer

Puchong, Malaysia
Aug 2025 – Present

- Built “Inside Platform”, a multi-service AI system combining Hono.js, Evolution API, and a custom Claude-powered memory layer to automate distributed messaging and operational workflows.
- Developed a centralized Next.js + Supabase ecosystem used by 5 SME clients to unify operational data, automate business processes, and contribute RM10k+ in monthly recurring revenue (MRR).
- Eliminated 100% of legacy manual recording friction by digitalizing asynchronous Whatsapp activity logs, Excel-based trip planning, check-ins, and commission tracking into real-time, automated workflows.
- Built “Inside-Assistant”, an internal RAG-powered AI assistant integrated with Lark, supporting document generation, scheduling, and tool-calling workflows and also engineered automated financial pipelines using n8n and Express with custom JavaScript logic for P&L and balance sheet processing.

DELL TECHNOLOGIES
Software Engineer Intern

Cyberjaya, Malaysia
Jul 2024 – Jan 2025

- Independently developed key modules for an agentless Database Monitoring System to automate real-time infrastructure tracking and performance monitoring across Oracle environments.
- Expanded centralized monitoring architecture to natively support 3 distinct database types, successfully eliminating the need for manual resource checks and complex client-side agent installations.
- Designed and implemented an integrated alerting mechanism featuring critical event categorization, significantly improving resource visibility and cross-team incident response times during infrastructure faults.

PROJECTS

Self-Evaluating Agentic RAG | [Live Demo](#)

- Built a production-shaped RAG chatbot with a built-in evaluation workflow, where users curate a golden Q&A dataset and run on-demand regression evals tracking Hit@k, MRR, and refusal accuracy across configuration changes.
- Engineered hybrid retrieval (dense ChromaDB + BM25 fused via Reciprocal Rank Fusion, reranked with a BGE cross-encoder) driving an agentic function-calling loop orchestrated with LangGraph and Gemini 2.5 Flash.

Task-oriented Dialogue System (FYP)

- Architected a multi-turn conversational AI assistant utilizing Python and Flask, implementing a structured Dialogue State Tracker (DST) and modular NLP pipeline for intent classification and slot filling.
- Engineered a hybrid NLU routing mechanism that prioritizes lightweight Rasa NLU for high-speed execution, while intelligently triggering an LLM Fallback layer to handle complex, ambiguous, or out-of-scope user queries.

TECHNICAL SKILLS

Languages & Core Frameworks: Python, SQL, JavaScript, Next.js, React, TypeScript, Vite, Flask

AI & Agentic Automation: n8n, Dify AI, LangChain, OpenClaw, RAG architectures, Prompt Engineering, Supabase, Claude Code

Machine Learning: Scikit-Learn, Pandas, NumPy, TensorFlow, PyTorch

Tools & Infrastructure: Git, Docker, Linux, Claude Code, Kubernetes, Ansible Playbooks, Vercel, Upstash Redis

ADDITIONAL INFORMATION

GitHub: github.com/leechenwei

Portfolio: luis-s-personal-web.vercel.app

Languages: Fluent in Mandarin, English; Bahasa Melayu
